PERSONAL STATEMENT

My academic and practical experience in software engineering has developed a strong interest in designing intelligent, accessible, and efficient software systems. During my undergraduate studies at NUML, I explored systems design, human–computer interaction, and applied computing, culminating in a Final Year Project focused on offline natural language processing for assistive technology.

Through internship experience at a federal regulatory authority and independent full-stack development projects, I have worked on real-world systems involving scalability, usability, and performance constraints. I am particularly interested in advancing research at the intersection of offline NLP, accessibility, and system architecture, and I seek to pursue a Master's degree to deepen both theoretical understanding and applied research skills in these areas.

RESEARCH INTERESTS

Human–Computer Interaction & Assistive Technology • *Software Architecture & Distributed Systems* • *AI-Assisted Software Engineering* • *Full-Stack & Cloud-Native Systems* • *Embedded Systems & Intelligent Devices*

EDUCATION

Bachelor of Software Engineering (BSSE) *Feb 2022 – Jan 2026*

National University of Modern Languages (NUML), Islamabad, Pakistan *CGPA: 3.45*

- Four-year accredited programme covering core areas of software design and architecture, algorithms and data structures, database systems, computer networks, requirements engineering, and software quality assurance.
- Relevant coursework: Object-Oriented Programming, Web Engineering, Human-Computer Interaction, Database Management Systems, Software Project Management, Computer Architecture.

RESEARCH & FREELANCE PROJECTS

Gaming Through Voice Recognition System — Final Year Project *Feb 2025 – Dec 2025*

Python | C# WPF | Offline NLP GitHub: abdullahgilani1/Gaming-Through-Voice-Recognition-System

- Investigated a research question with direct social impact: can offline speech recognition fully replace physical input for PC gaming by users with motor disabilities? Designed and implemented a working prototype that requires no internet connection, preserving privacy while maintaining real-time responsiveness.
- Designed cross-language integration between Python (speech recognition) and C# WPF, addressing challenges in inter-process communication, latency, and command interpretation.

E-Registration Portal — NEPRA (Government System) *Jul 2025 – Sep 2025*

React | Python Flask | MySQL GitHub: abdullahgilani1/NEPRA-Internship

- Analysed existing manual licensing workflows at a federal regulatory body, identified key bottlenecks, and designed a web-based information system to digitalise the end-to-end process by applying principles of requirements engineering, system modelling, and secure software design.

Showroom Management System — Enterprise Software *Oct 2025 – Feb 2026*

C# .NET | WPF | MySQL GitHub: abdullahgilani1/Makkah-Auto-Trading-Company

- Applied software engineering principles like separation of concerns, modular architecture, and data integrity constraints to design a multi-module desktop system encompassing inventory management, CRM, credit tracking, and a double-entry accounting engine.

- The automated ledger module demonstrated a measurable 90% reduction in manual bookkeeping time, providing a concrete case study in the real-world impact of well-architected software on operational efficiency.

AEED Institutional Website — Full-Stack System *Mar 2026*

MERN Stack • Live: www.aeed.com.pk Independent Development

- Designed and implemented a complete information system for an educational institution, applying user-centred design principles to serve two distinct user groups i.e, prospective students requiring structured access to academic information, and administrators requiring a data collection and management dashboard.

Seya Fashion — E-Commerce Platform *Nov 2025 – Dec 2025*

MERN Stack GitHub: abdullahgilani1/Seya-Fashion

- Led a collaborative software development effort applying Agile practices: coordinated task distribution, managed integration across frontend and backend components, and conducted iterative reviews to ensure system coherence across product catalogue, cart, checkout, and admin modules.

Spice Hut — Restaurant Management System *Sep 2025 – Nov 2025*

MERN Stack | RESTful API GitHub: abdullahgilani1/Spice-Hut-changeable

- Optimized database queries to support concurrent order processing and improve system performance under load, integrated Google Maps API and real-time synchronisation features, evaluating trade-offs between consistency and responsiveness in a multi-user environment.

PROFESSIONAL EXPERIENCE

Web Developer Intern — NEPRA (National Electric Power Regulatory Authority) *Jul 2025 – Sep 2025*

Islamabad, Pakistan • Full-time Internship Government of Pakistan

- Engaged in applied software engineering within a professional government setting, translating regulatory operational requirements into a functional web system through structured analysis, iterative prototyping, and systematic testing.
- Gained practical exposure to full-stack development under real institutional constraints: compliance requirements, stakeholder communication, and production-level reliability standards.

UI/UX Design Intern (Remote) — CodSoft *Feb 2025*

India (Remote) • Remote Internship

- Conducted structured user research, produced wireframes and high-fidelity Figma prototypes, and applied iterative design methodology across 4 complete interface projects spanning e-commerce, productivity, and service applications.

ADDITIONAL EXPERIENCE

Owner & Operator — Family Printing Business *2020 – Present*

Rawalpindi, Pakistan Self-Employed

- Took full responsibility for managing a family printing business at age 17, overseeing design, production, and client operations while completing a full-time degree. Demonstrates resilience, independence, and real-world business experience.

TECHNICAL SKILLS

Programming Languages	Software Development	Databases	Tools & Design
C/C++, C#, Python, Java	Web Development, Desktop Application Development	MySQL, MongoDB	MS Office, Git, Figma, CorelDraw, Adobe Illustrator, Inpage, .NET WPF, WAMP

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Work Experience Letter — Web Developer Intern *Sep 2025*

NEPRA — National Electric Power Regulatory Authority, Pakistan Government Authority

- Formally issued letter confirming applied software development contribution to a federal government system during a supervised internship.

UI/UX Design Internship Certificate *Feb 2025*

CodSoft, India Remote Internship Completion

- Certified completion of a structured UI/UX internship: wireframing, prototyping, user research, and iterative design using Figma.

Adobe Photoshop — Graphic Design *Udemy*

Udemy (Online Learning Platform) Verified Certificate

- Completed a structured course covering vector illustration, typography, branding, and professional graphic design workflows.

Adobe Illustrator — Graphic Design *Udemy*

Udemy (Online Learning Platform) Verified Certificate

- Completed a structured course covering vector illustration, typography, branding, and professional graphic design workflows.

REST API Development Certificate *Coursera*

Coursera (Online Learning Platform) Verified Certificate

- Completed a structured course covering all the aspects of developing and understanding of the REST APIs using NodeJS serverless functions.

English Language Proficiency Course *2019*

Government of Pakistan National Certified Programme

- Completed a short-term government-certified English language program (Pakistan) during post-matriculation vacation period.

LANGUAGES

Urdu (Native) **English** (Professional Proficiency — reading, writing, and spoken communication)
